

**SofTechnics Launches New Release of SoftGrocer**

Mobile Item and Inventory Management Solution  
Increases Item Accuracy and Inventory Availability

**September 26, 2008 – Akron, OH** – SofTechnics, a leading provider of integrated retail software solutions, is pleased to announce the general availability of SoftGrocer Version 1.6. SoftGrocer provides a single point of control for item and inventory management. New features included in the latest release make the receiving, replenishment, and tracking of store inventory even more efficient and precise.

SoftGrocer is a modular item and inventory management system with tools to help store associates focus on exceptions, and configurable to meet the specific needs of any grocery retailer. New functionality includes expanded EDI support of ASN and PO receiving, as well as additional data capture for detailed vendor scorecard reporting.

Tim Drummond, Vice President of Development for SofTechnics states, “We worked with GS1 to improve the EDI standards for ASN receiving and built support for these new standards directly into our latest SoftGrocer release. This exemplifies the SofTechnics focus on meeting our customer’s current and future requirements, and expanding capabilities for the grocery industry.”

A brand new Location-Based Inventory module is also available with this version of SoftGrocer, allowing associates to define and track inventory across multiple locations, including the back room.

There are many other new features included in this release, all based on SofTechnics’ direct work with customers and focused on real-world solutions to improve item and inventory management.
